

Your AI stack is not *a marketing OS.*

Use this six-layer map to see where your campaign work still depends on you carrying every handoff.

AGENTIC MARKETING OS

01 **Inputs**
Customer language, calls, signals, results

02 **Memory**
Audience, offer, proof, voice, objections

03 **Roles**
Researcher, strategist, writer, QA

04 **Tools**
Browser, CRM, files, analytics, assets

05 **Approvals**
What can draft, change, send, publish

06 **Heartbeat**
Daily, weekly, signal-based runs

REVIEW-READY DECISIONS

● THE GAP

Every task got faster. The campaign still waits.

Research is faster. Copy is faster. Images are faster. Reporting is faster. But if a human still carries every handoff, the system did not change.

The OS Map shows which layer is missing before you buy another tool.

Score the six layers before you build.

Inputs

Scattered notes or clear source set?

0 - 2

Memory

In heads or agent-readable vault?

0 - 2

Roles

One person does all or defined outputs?

0 - 2

Tools

Manual tabs or connected workbench?

0 - 2

Approvals

Ad hoc review or clear permission map?

Heartbeat

Manual prompts or scheduled runs?

0 - 4	AI-assisted work
5 - 8	Pieces of an operating layer
9 - 12	Ready for agent workflows

● FIRST BUILD

The weekly campaign brief machine.

It is narrow enough to build and useful enough to matter. It touches research, strategy, proof, copy, and approval without giving an agent permission to publish.

INPUTS

Performance, customer phrases, competitors, product notes, objections

MEMORY

Audience, offer, proof, voice, objections

ROLES

Researcher, strategist, copywriter, QA, operator

OUTPUT

Campaign thesis, angles, asset directions, risks, decisions needed

● MAPPING PROMPT

You are mapping our marketing operation into an agentic OS.

Inspect:

1. Inputs.
2. Memory.
3. Roles.
4. Tools.
5. Approvals.
6. Heartbeat.

For each layer, identify:

- What exists now.
- What is missing.
- What work still depends on a human handoff.
- The smallest useful workflow to build first.

● REVIEW-READY OUTPUT

The first useful artifact is a brief.

01 Campaign thesis

02 Buyer belief to challenge

03 Source signals

04 Proof we can use

05 Landing page direction

06 Risks and decisions needed
